TOPIC 14 | EVIDENCE REPORT

Sub-Workflows, Debugging & Production Readiness

Assessment evidence from the supplied n8n screenshots | 23 October 2026

Implementation summary

Three n8n workflows were built and exercised: (1) Sub-Workflow 1 - Tax Engine, (2) Sub-Workflow 2 - Payment Gateway, and (3) Master Order Orchestrator. The Tax Engine validates inputs and calculates tax; the Payment Gateway simulates a successful charge; the master orchestrates both and returns a final confirmation.

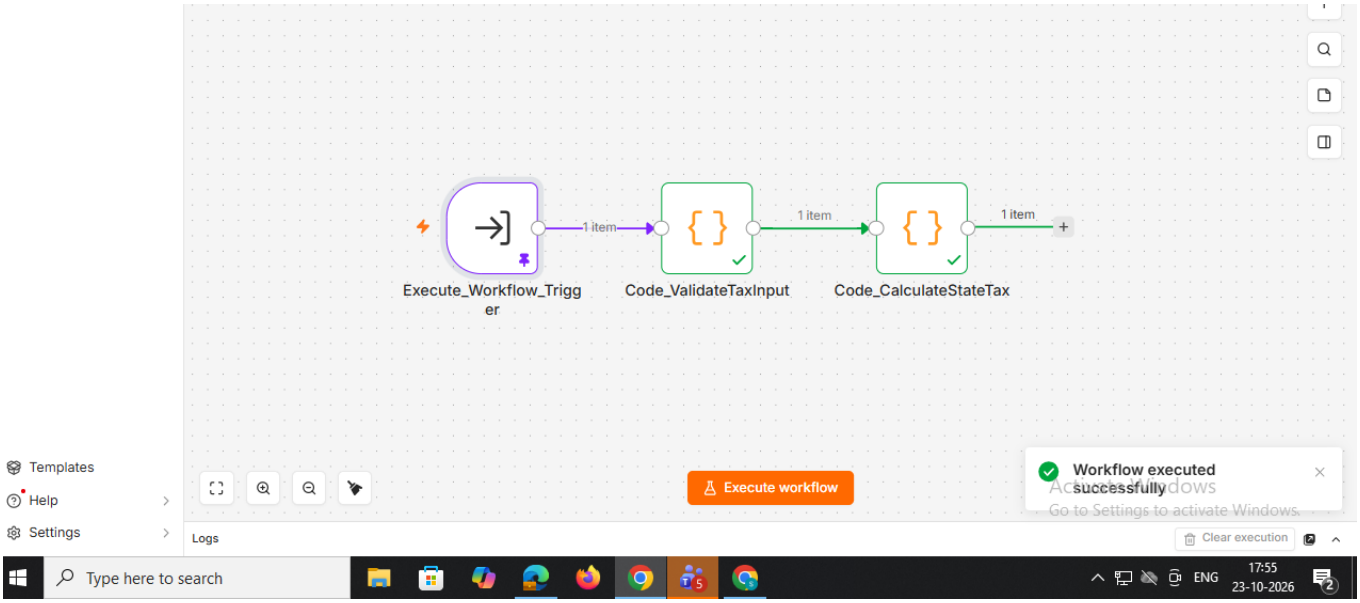

Verified test results

Scenario	Observed result
Tax Engine (CA, subtotal 1000)	Tax 82.50; grand total 1082.50
Payment Gateway simulation	SUCCESS; amount charged 1082.50
Master end-to-end	CONFIRMED; all five nodes green
Invalid subtotal (-100)	Contract violation; payment not run

Evidence interpretation

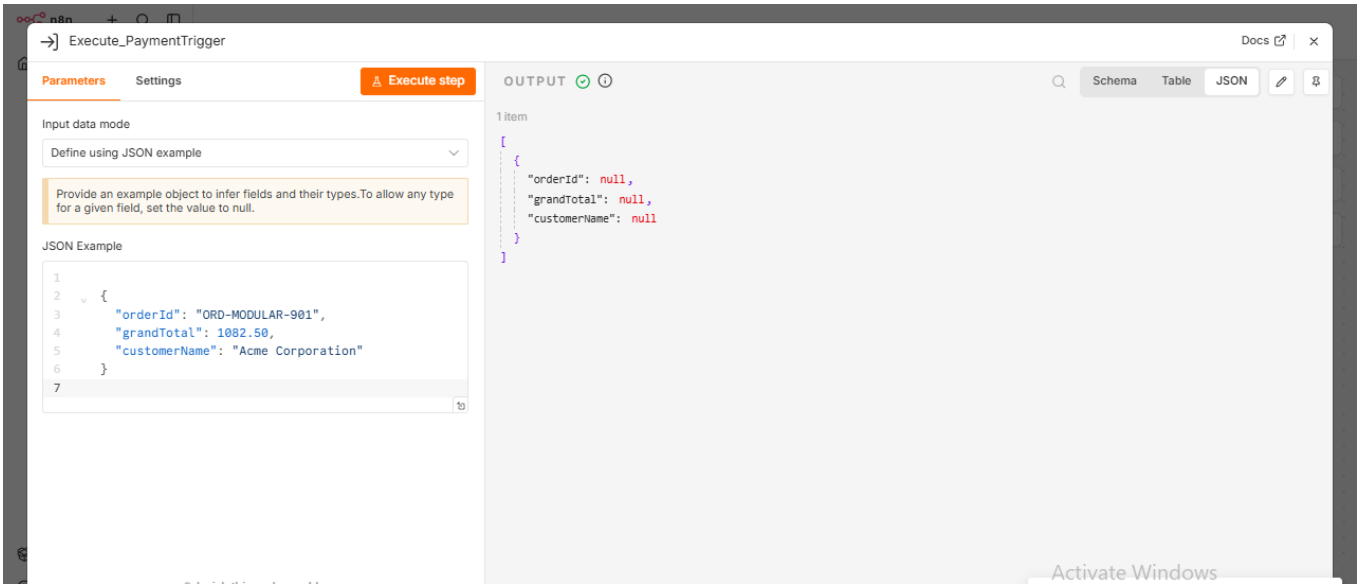

Screenshots substantiate successful sub-workflow invocation and input validation. Payment is simulated; production payment integration, Docker Compose deployment, persistent audit logging and operational monitoring are not established by these screenshots. The invalid-subtotal test demonstrates rejection at the Tax Engine boundary.

Evidence 01 | Tax Engine - Successful Execution

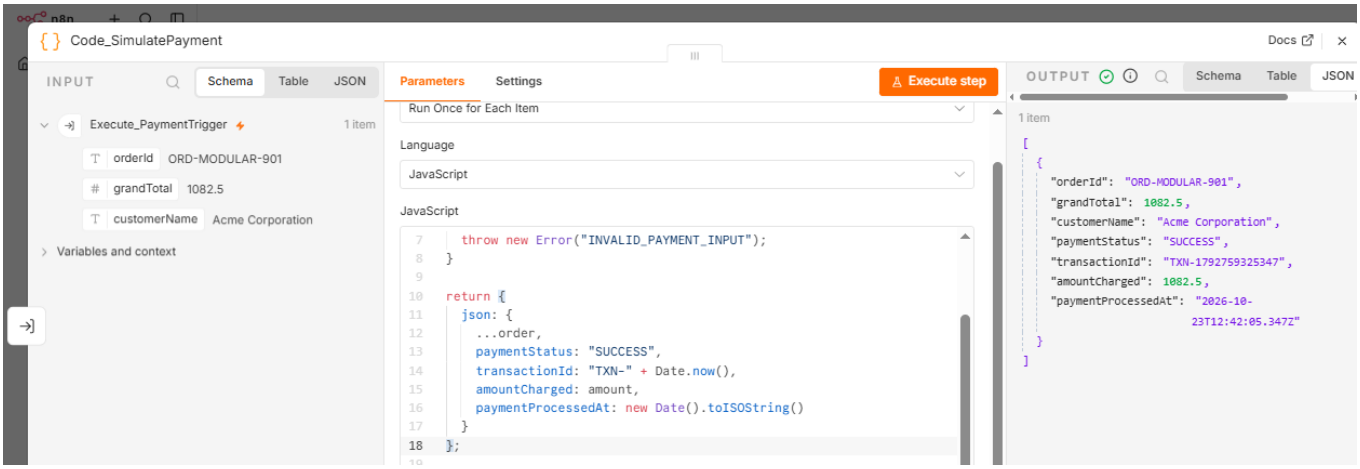

The Execute Workflow Trigger, input validation and tax calculation nodes complete successfully using pinned test input.

Evidence 02 | Payment Gateway - Input Contract

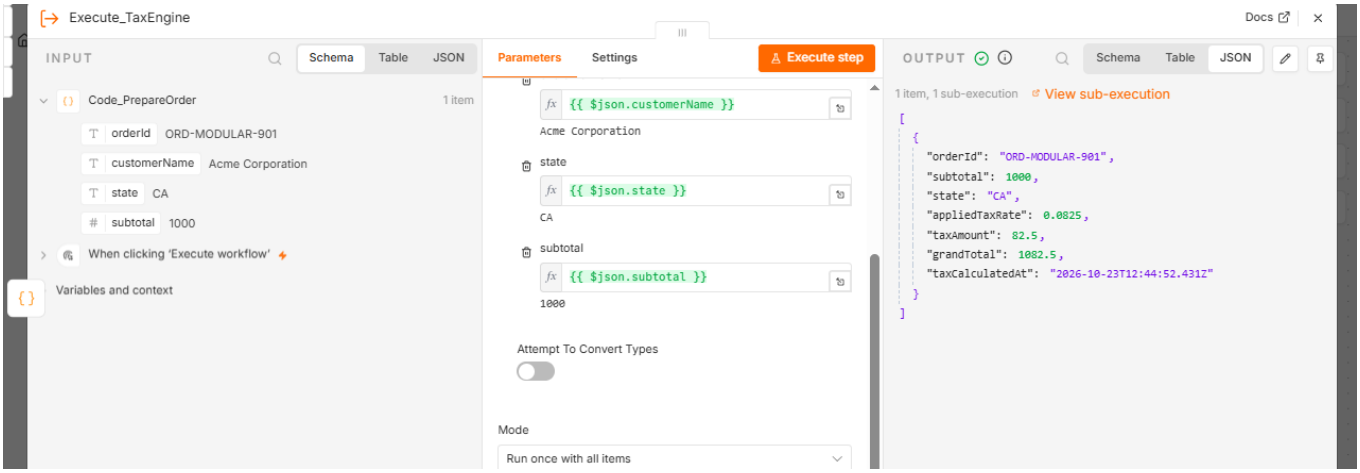

The child-workflow trigger defines orderId, grandTotal and customerName. The displayed null values are schema placeholders, not payment failures.

Evidence 03 | Payment Gateway - Successful Simulation

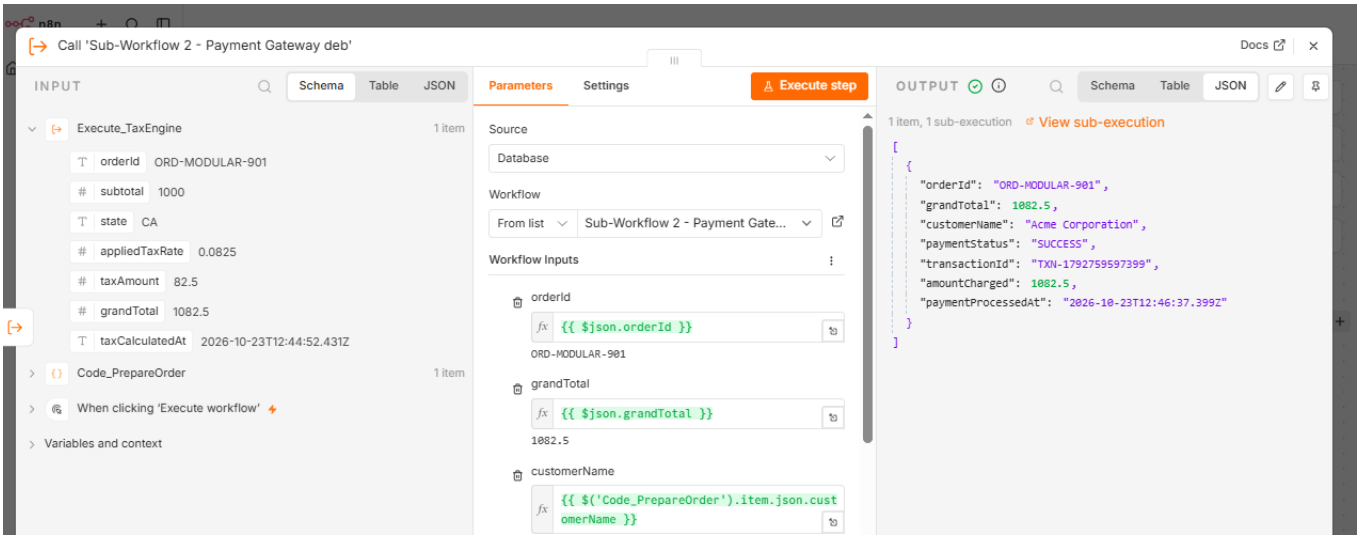

Payment simulation returns SUCCESS with amountCharged 1082.50 and a generated transaction ID; no real payment was charged.

Evidence 04 | Master - Tax Engine Sub-Execution

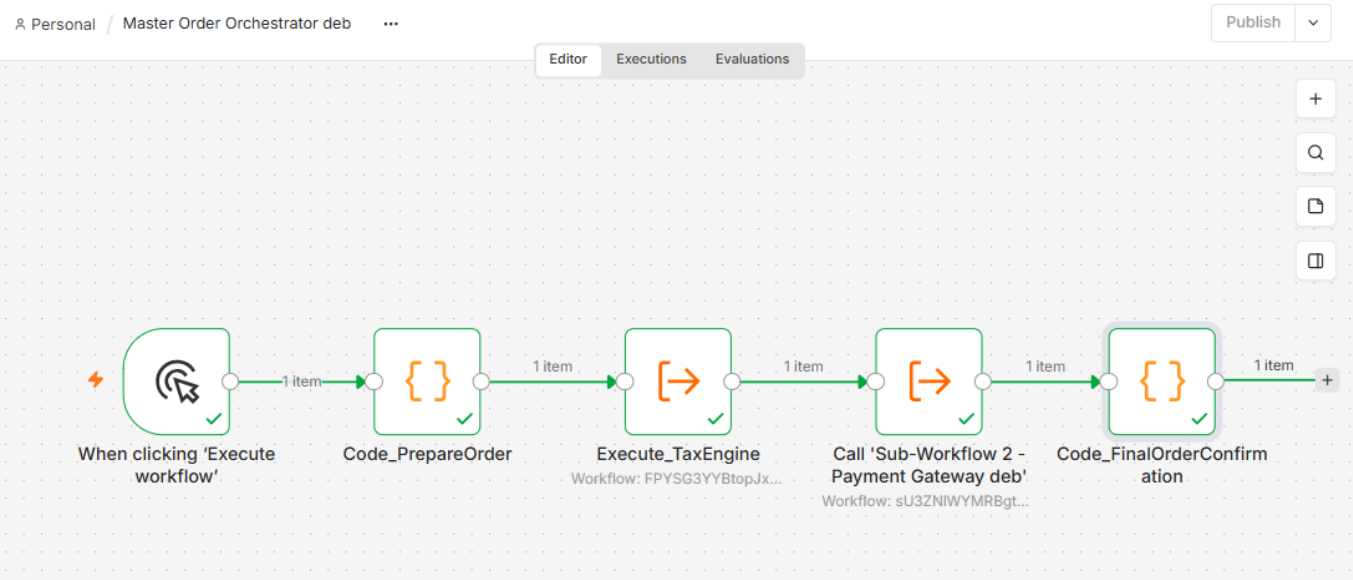

The master passes the California order to the Tax Engine and receives 8.25% tax, taxAmount 82.50 and grandTotal 1082.50.

Evidence 05 | Master - Payment Gateway Sub-Execution

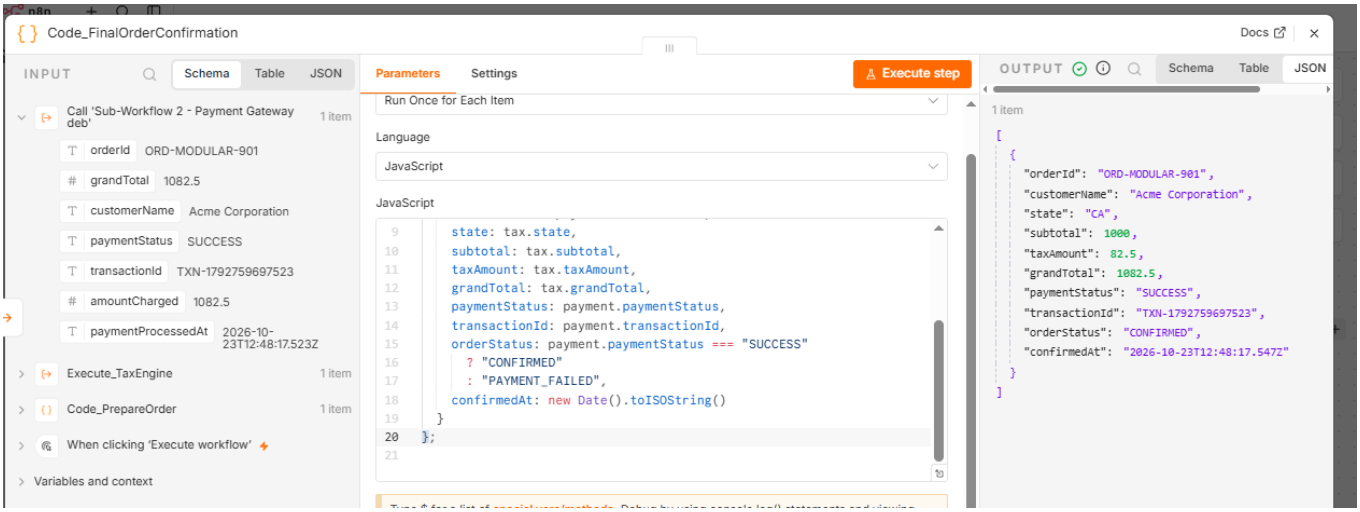

The master invokes the Payment Gateway with order ID, grand total and customer name, receiving paymentStatus SUCCESS.

Evidence 06 | Master - Complete Successful Workflow

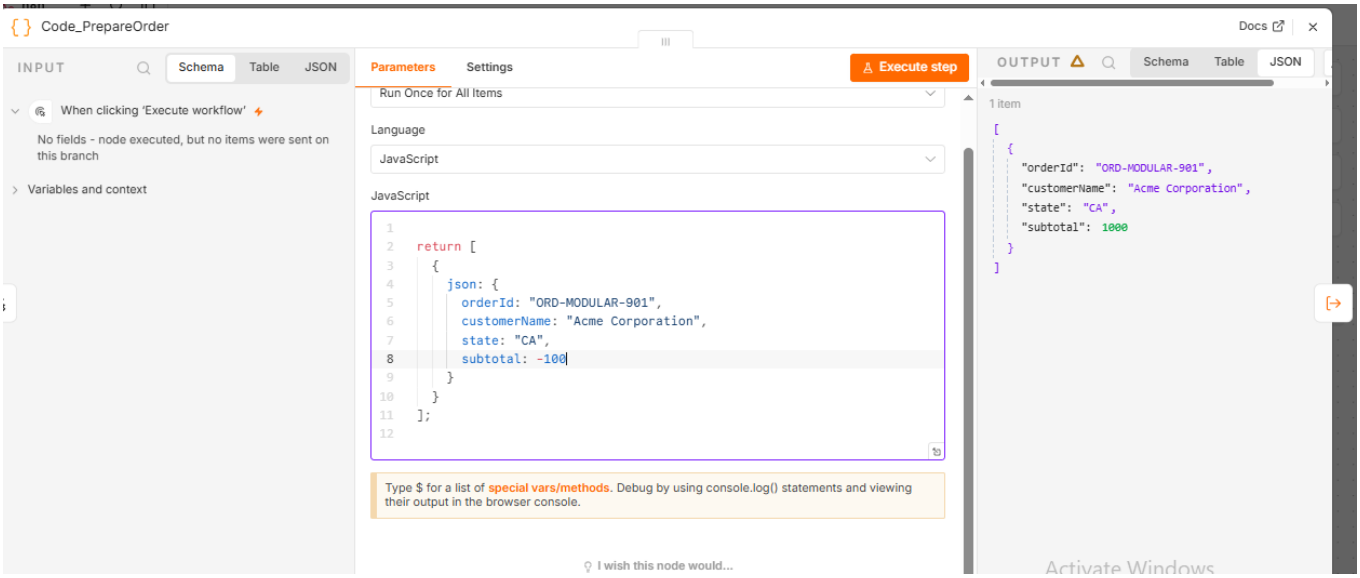

All five master workflow nodes complete successfully: order preparation, tax calculation, payment simulation and final confirmation.

Evidence 07 | Final Order Confirmation - Output

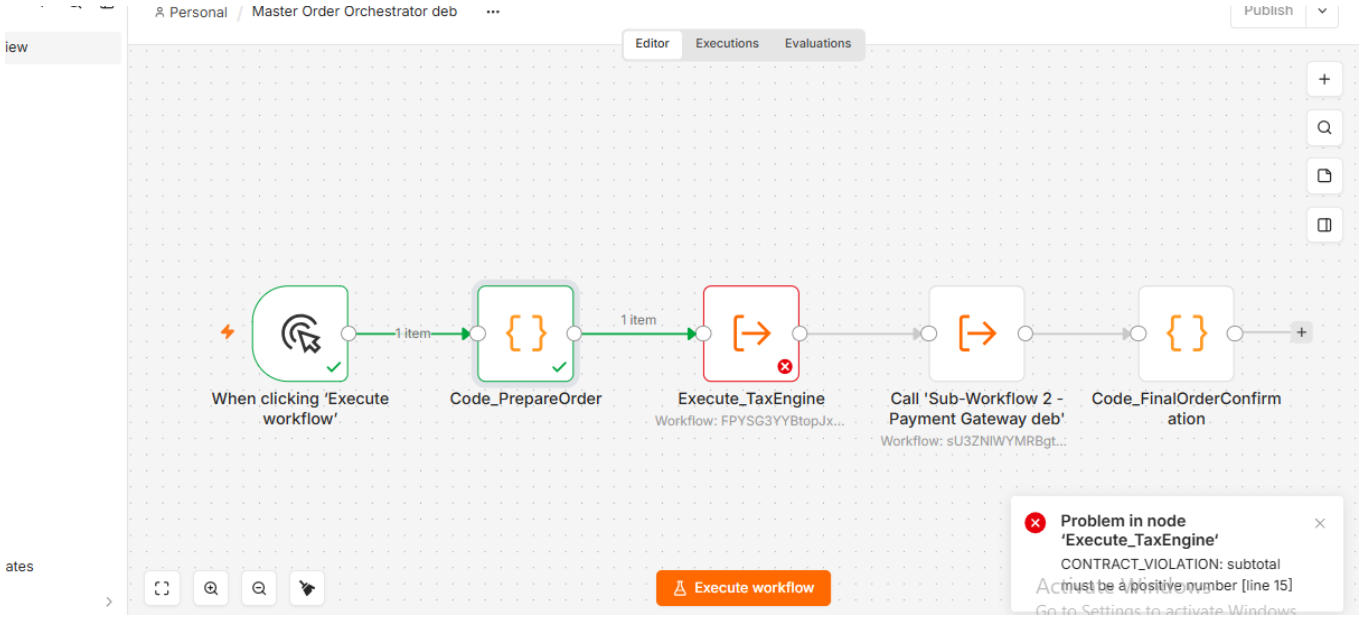

The final record shows orderStatus CONFIRMED, paymentStatus SUCCESS, subtotal 1000, taxAmount 82.50 and grandTotal 1082.50.

Evidence 08 | Negative Subtotal - Test Input

The master order is changed to subtotal -100 to test input contract enforcement. The output panel can still show an earlier result before re-execution.

Evidence 09 | Negative Subtotal - Validation Rejection

The Tax Engine sub-execution fails with CONTRACT_VIOLATION: subtotal must be a positive number. Payment and confirmation nodes do not run.
